"The covalent structure of calf skin type III collagen. VI. The amino acid sequence of the carboxyterminal cyanogen bromide peptide alpha 1(III)CB9B (positions 928-1028).";

Hoppe-Seyler's Z. Physiol. Chem. 360:861-868(1979).

-I-FUNCTION: COLLAGEN TYPE III OCCURS IN MOST SOFT CONNECTIVE TISSUES ALONG WITH TYPE I COLLAGEN.

-I-SUBUNIT: TRIMERS OF IDENTICAL ALPHA 1(III) CHAINS. THE CHAINS ARE LINKED TO EACH OTHER BY INTERCHAIN DISULFIDE BONDS. TRIMERS ARE ALSO CROSS-LINKED VIA HYBROXYLYSINES.

-I-PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDIINE=80026030; PubMed=488910;

NIDGEN.

NIDGEN.

1. SUBUNIT: THERE ARE SIX TYPE IV COLLAGEN ISOFORMS, ALPHA 1(IV)-ALPHA 6(IV), EACH OF WHICH CAN FORM A TRIBLE HELIX STRUCTURE WITH 2 COTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.

1. SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).

1. ALTERNATIVE REDOUCTS: AT LAST 3 ISOFORMS; 1 (SHOWN HERE), 2/V AND 3/L5; ARE PRODUCED BY ALTERNATIVE SPLICING. THEY DIFFER IN THEIR C-TERMINAL NC1 DOWAINS.

1. COMMAIN (NC1 DOWAINS.

1. COCHLEA, LUNG AND PRESENT ONLY IN BASEMENT MEMBRANES OF KIDNEY, EYE, COCHLEA, LUNG AND BRAIN.

1. DOWALN: ALPHA GOTYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOWAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE GAY.Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE FLEXIBILITY IN THE TRIPLE HELLIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL DOWAIN.

1. POMS: FLEXIBILITY IN THE TRIPLE HELLIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE FLEXIBILITY IN THE TRIPLE HELLIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE OF THE TRIPLE HELIX). AND A SHORT N-TERMINAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE OF THE TRIPLE HELIX). AND A SHORT N-TERMINAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE OF THE TRIPLE HELIX). AND A SHORT N-TERMINAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE OF THE TRIPLE HELIX). AND A SHORT N-TERMINAL TRIPLE-HELIX AND A SHORT N-TERMINAL TRIPLE-HELIX AND ADDITIONAL N-LINKED GLYCOSYLATION SITE.

1. PIM: TYPE IV COLLAGENS CONTAIN NUMBEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. 12 OF THE SILOCATED IN THE NCI DOWAIN, ARE CONSERVED IN ALL KNOWN TYPE TO COLLAGENS IN THE NCI DOWAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Reeders S.T., Smeets H.J.M.;

"Mutations in the type IV collagen alpha 3 (COL4A3) gene in autos mutations in the type IV collagen alpha 3 (COL4A3) gene in autos recessive Alport syndrome.";

Hum. Mol. Genet. 3:1269-1273(1994).

-!- FUNCTION: TYPE IV COLLAGEN IS THE MAJOR STRUCTURAL COMPONENT GLOWERULAR BASEMENT MEMBRANES (GBM), FORMING A 'CHICKEN-WIRE' MESHWORK TOGETHER WITH LAMININS, PROTEOGLYCANS AND ENTACTIN/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Alternative splicing of the NCI domain of the human alpha 3(I collagen gene. IV COLLAGENS.

PTM: Phosphorylated by the Goodpasture antigen-binding protein.

PIME PROSPHORYLATED BY AGAINST THE NC1 DOMAIN OF ALPHA3(IV) MEDIATE

DISEASE: ANTIBODIES AGAINST THE NC1 DOMAIN OF ALPHA3(IV) MEDIATE

THE HUMAN AUTOIMMUNE DISEASE, GOODPASTURE SYNDROME, WHICH IS

CHARACTERIZED BY HEMATURIA AND PULMONARY HEMORRHAGE.

DISEASE: DEFECTS IN COL4A3 ARE ASSOCIATED WITH THE TYPE I

AUTOSOMAL RECESSIVE FORM OF ALFORT SYNDROME, AN HEREDITARY

GLOMERULONEPHROPATHY CHARACTERIZED BY PROGRESSIVE REMAL FAILURE,

GLOMERULONEPHROPATHY CHARACTERIZED BY PROGRESSIVE REMAL FAILURE,

HEMATURIA AND DEAFNESS. THE RECESSIVE FORM OCCURS EQUALLY BETWEE:

CC -1- FUNCTION: COLAISA PROBASLY PLAYS A MAJOR ROLE IN DETERMINING THE
RETINAL STRUCTURE AS WELL AS IN THE CLOSURE OF THE NEURAL TUBE.
CC -1- FUNCTION: ENDOSTATIN POTENTLY INHEITS ENDOTHELIAL CELL
PROLIFERATION AND ANGIOGENESIS. MAY INHEIT ANGIOGENESIS BY
RACTOR SIGNALLING.
CC -1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A SHORT FORM/NC1-303 AND A LONG
PORM/NC-493 (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.
-1- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS
IN LIVER, LUNG AND KIDNEY.
-1- PTM: PROLITES THE THIRD POSITION OF THE TRIPEPTIDE REPEATING
UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE-20289799; PubMed=10830953;

Heterozygous Asn-1437 individuals have a 2.5 times increased chance of developing prostate cancer as compared with homozygous Asp-1437 individuals. DISEASE: Defects in COL18A1 are a cause of Knobloch syndrome (KS or KNO); an autosomal recessive disorder defined by the occurrence of high myopia, vitreoretinal degeneration with retinal detachment, macular abnormalities and occipital encephalocele. SIMILARITY: BELONGS TO THE FIBRIL-ASSOCIATED COLLAGENS WITH INTERRUPTED HELICES (FACIT) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           requires a license agreement (See http://www.isb-sib.ch/announce/

"Cloning and developmental expression of the alpha 3 chain of chi
type IX collagen.";

J. Biol. Chem. 267:10070-10076(1992).

-I-FUNCTION: COLLAGEN TYPE IX IS A MINOR CARTILLAGE NONFIBRILLAR
COLLAGEN. IT IS ASSOCIATED WITH TYPE II COLLAGEN FIBRILS.
-I-SUBUNIT: TRIMERS COMPOSED OF THREE DIFFERENT CHAINS: ALPHA 1ALPHA 2(IX), AND ALPHA 3(IX).

-I-PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATIONIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS. TRIPEPTIDE REPEATING ALPHA 1(IX) of chicken

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               lysine-derived cross-links.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

SIMILARITY: BELONGS TO THE FIBRIL-ASSOCIATED COLLAGENS WITH INTERRUPTED HELICES (FACIT) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING, DOMAIN: EACH SUBULIT IS COMPOSED OF THREE TRIPLE-HELICAL DOMAINS INTERSPERSED WITH NONCOLLAGENOUS DOMAINS. THE GLOBULAR DOMAIN AT THE WITH NONCOLLAGENOUS DOMAINS. THE GLOBULAR DOMAIN AT THE WITH DOMAIN STYPE IX COLLAGEN MOLECULES REPRESENTS THE NC4 DOMAIN WHICH MAY PARTICIPATE IN ELECTROSTATIC INTERACTIONS WITH POLYANIONIC GLYCOSAMINOGLYCANS IN CARTILAGE.

PTM: COVALENTLY linked to the telopeptides of type II collagen by the covalently linked to the telopeptides

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

DISEASE: Defects in COL5A2 are a cause of Ehlers-Danlos syndrome gravis or type I (EDS-I), and Ehlers-Danlos syndrome mitis or type II (EDS-I). Ehlers-Danlos syndrome is a genetically and phenotypically heterogeneous connective-tissue disorder characterized by loose-jointedness and fragile, velvety, stretchable, bruisable skin that heals with peculiar 'cigarette-paper' scars. EDS-I and EDS-II are autosomal dominant traits.

SIMILARITY: CONTAINS 1 VWFC DOMAIN.

FUNCTION: MAJOR COMPONENT OF THE DESCEMET'S MEMBRANE (BASEMENT MEMBRANE) OF CORNEAL ENDOTHELIAL CELLS.
SUBUNIT: MAY FORM HOMOTRIMERS, OR HETEROTRIMERS IN ASSOCIATION WITH ALPHA 2 (VIII) TYPE COLLAGENS.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
MISCELLANBOUS: FOUR CONSECTIVE GLY-PRO-PRO TRIPLETS ARE PRESENT AT THE C-TERMINUS OF THE TRIPLE-HELICAL REGION. THESE MAY PROVIDE THE HIGH THERMAL STABILITY OF THIS REGION.

SIMILARITY: STRONG, TO ALPHA 2 TYPES VIII AND X COLLAGENS.

"Cloning and sequence analysis of cDNAs encoding the alpha 1, all and alpha 3 chains of mouse collagen VI.";

Biochem. J. 291:787-792(1993).

-i- FUNCTION: COLLAGEN VI ACTS AS A CELL-BINDING PROTEIN.

-i- SUBUNIT: TRIMERS COMPOSED OF THREE DIFFERENT CHAINS: ALPHA 1(ALPHA 2(VI), AND ALPHA 3(VI).

-I- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN ADIPOSE TISSUE, LUNG, ADRENAL GLANDS AND OVARY. LOWER LEVELS IN TESTIS, TONGUE, SKI.

KIDNEY, HEART, INTESTINE AND SPLEEN. NO EXPRESSION IN SKELETAL MUSCLE OR LIVER.

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; I (SHOWN HERE) AND II; ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- DOWAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE DOMAIN (NC1) AT THEIR CENTRAL TRIPLE-HELICAL DOMAIN (WHICH MAY CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.

-!- PTM: PROLINES AT THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.
-!- PTM: PROLINES AT THE TRIPLE DISSITION OF THE TRIPLE-TIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
-!- PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER- AND INTERMOLECULAR DISULFIDE BONDING. 12 OF THESE, LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                                                                                "The complete primary structure of a nematode alpha 2(IV) and the partial structural organization of its gene.";

MEMBRANE) OF CORNEAL ENDOTHELIAL CELLS.

-!- SUBUNIT: WAY FORM HOMOTRIMERS, OR HETEROTRIMERS IN ASSOCIATION WITH ALPHA 2 (VIII) TYPE COLLAGENS.
-!- TISSUE SPECIFICITY: HIGH LEVELS IN CALVARIUM, EYE & SKIN OF NEWBORN MICE, ALSO IN VARIOUS EPITHELIAL, ENDOTHELIAL AND MESENCHYMAL CELLS:
-!- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
-!- SIMILARITY: STRONG, TO ALPHA 2 TYPES VIII AND X COLLAGENS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "Alpha'l (VIII)-collagen gene transcripts encode a short-chain collagen polypeptide and are expressed by various epithelial, endothelial and mesenchymal cells in newborn mouse tissues."; Eur. J. Blochem. 207:895-902(1992).

Schmid metaphyseal chondrodysplasia.";

J. Hum. Genet. 43:259-261(1998).

I. Hum. Genet. 43:259-261(1998).

I. FUNCTION: TYPE X COLLAGEN IS A PRODUCT OF HYPERTHROPHIC CHONDROTOCYTES AND HAS BEEN LOCALIZED TO PRESUMPTIVE MINERALIZATION ZONES OF HYALINE CARTILAGE.

I. SUBUNIT: HOMOTRIMER.

I. PYM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEAT UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

I. DISBASE: DEFECTS IN COLLIDAL ARE THE CAUSE OF SCHMID TYPE METAPHYSEAL CHONDRODYSPLASIA (SMCD), A DOMINANTLY INHERITED DISGREE OF THE OSSBUS SKELETON. THE CARDINAL FEATURES OF THE PHENOTYPE ARE MILD SHORT STATURE, COXA VARA AND A WADDLING GPHENOTYPE ARE MILD SHORT STATURE, COXA VARA AND A WADDLING GPHENOTYPE ARE MILD SHORT STATURE.
                                                                                                                                                                                                                                                                                                                                                                                                                    VARIANT SMCD CYS-597.

FUNCTION: NEWATODE CUTICLES ARE COMPOSED LARGELY OF COLLAGEN-LIKE PROTEINS. THE CUTICLES PUNCTIONS BOTH AS AN EXOSKELETON AND AS A BARRIER TO PROTECT THE WORM FROM ITS ENVIRONMENT.

MISCELLANEOUS: THIS PROTEIN SHOWS 4 POTENTIAL TRIPLE-HELICAL REGIONS, WHICH CONVAIN GLYCINE AS EVERY THIRD AMINO ACID.

MISCELLANEOUS: IN ALL NEWATODE CUTICLE COLLAGENS, THE POLYPEPTIDE CHAINS ARE COMPLEXED MITHIN THE CUTICLE BY DISULPIDE BONDS AND CHAINS ARE COMPLEXED MITHIN THE CUTICLE BY DISULPIDE BONDS AND CHAINS ARE COMPLEXED TO THE CUTICULAR COLLAGEN FAMILY.

CONTROLLING LATERAL GROWTH OF COLLAGEN II FIBRILS.

-ISUBUNIT: TRIMERS COMPOSED OF THREE DIFFERENT CHAINS: ALPHA 1(XI),
ALPHA 2(XI), AND ALPHA 3(XI) ALPHA 3(XI) IS A POST-TRANSLATIONAL
MODIFICATION OF ALPHA 1(II). ALPHA 1(V) CAN ALSO BE FOUND INSTEAD
OF ALPHA 3(XI)=1(II).

-I- ALTERNATIVE PRODUCTS: 8 isoforms; 1 (shown here), 2, 3, 4, 5, 6, 7
and 8; may be produced by alternative splicing. They lack exons 6,
7 or 8 or a combination of these exons.
-I- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPFIDE REPEATING
UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
-I- PTM: A DISULFIDE-BONDED PEPTIDE CALLED PROLINE/ARGININE-RICH
PROTEIN OR PARP IS RELEASED PROM THE AMINO TERMINUS DURING
EXTRACELIULAR PROCESSING AND IS SUBSEQUENTLY RETAINED IN THE

AMOUNTS.

DISEASE: Defects in COLLIA2 are the cause of Stickler syndrome type 3 (STL3). It is an autosomal dominant disorder characterized by oro-facial, auditory and skeletal manifestations, such as midfacial hypoplasia, cleft palate, osteoarthritis, and sensorineural hearing loss. Differently from Stickler syndrome type 1 and 2, no ocular involvement is observed. This disorder is also referred to as Stickler-like syndrome or non-ocular Stickler
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pediatr.

DISEASE: Defects in COLIIA2 are the cause of Meissenbacher-
Zweymueller syndrome (MZS), an autosomal dominant disorder allelic with STL3 and OSMED. It is also referred to as heterozygous OSMED.

DISEASE: Defects in COLIIA2 are the cause of autosomal dominant DISEASE: Defects in COLIIA2 are the cause of autosomal dominant nonsyndromic sensorineural deafness type 13 (DFNA13). Affected individuals experience progressive hearing loss beginning in the second to fourth decades, eventually making use of amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DATABASE: NAME=Hereditary hearing loss homepage;
